

Team Meeting — Simulator Programme

Monday 09:00

1 · Opening

- Recording on
 - Rich on holiday until Tuesday
-

2 · Why we're here

We've agreed we're looking for ways to improve our real-world result — and that improvement comes through a better M1 and start performance.

Three ways we improve:

Knowledge	Training	Under pressure
Understand the settings and how we should do things	Train the right things, the right way	Make it hold when it counts

The more prepared we are, the better we perform. **The sim lets us work on all three.**

3 · Learnings from last week

- Martine
 - Open floor — who has learnings to share?
-

4 · Accountability — to settle

- We haven't yet agreed what happens when the agreed job isn't done.
- This needs settling as a group.

5 · This week's programme

Two sessions:

- **Wednesday — free practice**
 - **Thursday — main session**
-

6 · Objectives for the week

Objective 1 — Does the sim reflect reality well enough?

Verify the platform in a few basic but decisive ways:

- **TWS** — which true wind speed gives the most realistic behaviour
- **T1 / T2 calibration** — check against our role planner
- **Turn rate** → **TTK** — how much does turn rate affect TTK?
- **Acceleration H1** → **foiling** — does it match reality? If it's off, the positioning game is off too.

Objective 2 — Can the sim reproduce what decides our starts?

Can we build situations with the **same T1** where we can see the effect of **gas** and **positioning** — the two things that impact the start most?

- Racereplay
 - Influx model with nico
 - Peripheral view
 - Landscape
-

What success looks like by Thursday

We can say:

1. Whether this sim is realistic enough to train starts.
2. Whether it can reproduce a gas / positioning situation we can learn from.
